

Reliable Paint Removal for Every Need

Speedheater System continues to be the market leader in the further development of paint stripping using Infrared Technology. We are known world wide for our superior features in paint, putty and varnish removal. Our products are easy to use for anyone and offer greater safety especially when removing lead-based paint. All products are of high quality and using them will result in more cost-effective results; premium wood preservation; and a minimum environmental impact. Speedheater System's products are used by home owners, professionals and preservationist alike.

Home owner

A couple have lived in their beautiful house for many years and they have managed to do several house projects themselves in the past. A few years ago their house exterior was in need of complete paint removal before repainting since there were to many layers of paint. They decided to hire a contractor to do the whole exterior work. It cost the couple \$9000 for the paint removal and repainting. They thought it was very expensive but the Contractor said that the chemicals used for the paint removal were costly. They accepted those facts and were very happy with the end result. Four years after the exterior was completed they noticed that the paint started to fall off.

Their first thought was that the paint used on the house was of poor quality but they were mistaken. Sample tests of the surface showed that there was an active ingredient common in chemical strippers.

Although the contractor was thorough when he washed the chemical off, there is still a chance that some traces remain on wood and the whole paint removal process starts again. This couple was determined not to make a costly mistake again and took their time in finding the best method for paint removal. After recommendations by several knowledgeable people they decided to strip the paint off their house with a Speedheater and they would also use the same machine to restore the old windows on their cottage.

Preservationist

The Marine Museum of Karlskrona in Sweden are known for their many treasures and for being meticulous in bringing back historical object to a mint condition. A few years ago they were hired by the government of Denmark to restore their seven historical figure heads with the oldest one dating 1824 and the newest one dating 1862. The whole restoration team did a thorough research in finding the best methods for this project. They took the advice of the national heritage board in Sweden where they said that a Speedheater would be most gentle and effective paint removal tool for this delicate restoration project. The team was successful in restoring all seven figure heads.

Professional

Wood boats are a beautiful sight to see but it also takes a lot of hard work to keep in good condition. We were contacted by a small boat yard owner who specialized in different service work for wood boats. He had during his years in the field removed varnish from many boats using different methods such as chemicals, grinding and a heat gun. He had heard from a painter friend that a Speedheater worked excellent on paint and varnish and that he should give it a try. He tried it out and was impressed with the speed and gentleness of the Speedheater. Although he would still use the grinder for detail work and chemicals on the bottom paint, the Speedheater solved a very big problem for him. Before, he would not leave his trainee alone with a heat gun because of the risk of fire and damages on wood. Now he can work on another boat while his trainee removes varnish with the Speedheater.

speedheater® System

Solutions for Paint Removal

Paint Stripping

Strip GREEN Strip SAFE Strip FAST

Remove paint, putty and varnish in just seconds, using The Speedheater System™ from Sweden. Our NEW UL approved Speedheater, hands free attachments and unique professional scrapers is the best solution for the toughest paint stripping problems.

SPEEDHEATER IR SYSTEM STANDARD is a complete solution for different paint removal jobs, large or small. This system can be used when working on a ladder and the ladder hook enables you to hang the Speedheater when scraping. The different scraping tools, are all you need for every type of paint surface. The Speedheater Method™ is based on paint removal on wooden surfaces with infrared technology. It is environmentally friendly and gentle on wood. It is recommended by the National Heritage Boards in Sweden, Norway and Finland.

SPEEDHEATER ARM CLASSIC is an accessory to Speedheater IR System Standard and makes a large exterior or interior work very efficient. This accessory speeds up the work to more than double. Both hands are available for scraping and while working on one area, the next area is warmed up and prepared for scraping. The Classic arm has many adjustment possibilities and can be used on scaffolding or with the included wall bracket.

Needed for this system: Vertical tube that measures 1-1 1/2" in diameter.

SPEEDHEATER WINDOW TOOLS are an accessory to Speedheater IR System Standard and together becomes a complete solution for window restoration. Our unique scraping tools make it possible for you to remove paint and putty at the same time, easily and quickly, without breaking the glass.
